PRICE LIST

OF THE

Hartford Woven Wire Mattress Co.,

HARTFORD, CONN.

HOLYOKE, MASS.: TRANSCRIPT PUBLISHING COMPANY, PRINTERS. 1883.

INTRODUCTORY.

MATTRESS has demonstrated its usefulness in Families, Hotels, Insane Asylums, Hospitals, etc., where three hundred and fifty thousand HARTFORD WOVEN WIRE MATTRESSES are in actual use. Of this number, one hundred thousand are in public institutions rendering complete satisfaction. This form of spring bed early attracted the attention of medical experts as one possessing the essential requirements of a strong, and at the same time, heathful bed.

Dr. H. F. Carriel, Superintendent of the Illinois State Asylum for the Insane, at Jacksonville, Illinois, was the first to discover its fitness for asylum use by placing a large number in his Institution, and to Dr. James Knight, of the Institution for the Relief of the Ruptured and Crippled, of New York, is due the credit for having first adopted it for general hospital use.

Attention is called to the voluntary testimonials of these gen tlemen in the closing pages of this pamphlet. A brief description of the WOVEN WIRE MATTRESS is given below, together with directions for use.

The wire webbing is composed of spiral coils, interlocking at each revolution with the preceding formed coils, extending in the longitudinal direction of the frame, combined with cords at intervals for additional strength. Stretched on a hard wood frame it becomes a spring-bed bottom of superior excellence. The wire is composed of steel, highly tempered, with a tinned surface, to secure the necessary elasticity and to prevent corrosion when exposed to the atmosphere. Attention is directed to plates 1 and 2.

The advantages of this form of spring bed are that it yields less laterally than longitudinally, and bodies of unequal weight may rest upon it and never experience the discomfort of gravitating toward the center of the bed. The elastic wire fabric conforms to the body, showing only gentle and proportionate depressions on its surface. Composed of metal, it affords no opportunity to become infected with impurities arising from the body, nor for the lodgment of fibrous matter and harboring of vermin. And to these facts its popularity as a sleeping arrangement is attributed, together with the fact that it conduces to health, comfort and convenience.

For private or hospital use this bed is not only healthful but economical. In the dormitories of public institutions with the modern conveniences for heating, one or two thicknesses of blankets are sufficient for the covering mattress to form a comfortable, healthful and economical bed. No disinfectants are required, as the light covering mattresses can be removed for cleansing when necessary, and replaced in a clean condition. This advantage, with the facility for the circulation of air through the uniformly open wire fabric, secures a pure and healthful bed at all times. For private use, a very thin curled hair mattress forms a comfortable and inexpensive bed.

Attention is called to the following pages containing illustrations and price-list of the various styles of Woven Wire Mattresses with CAST-IRON, WROUGHT-IRON, and BRASS BED-STEADS, all having the woven wire for the support of the bedding, made for Hospital, Asylum and general use. These are adapted to all climates, more especially to warm climates, as they combine all the requisites to a perfect sleeping arrangement. During the present year we have added to our extensive list of bedsteads a number of elegant BRASS BEDSTEADS to meet a demand for this class of goods.

Serious objections have heretofore been uttered against brass bedsteads when the spring-bed had to be placed on the top of the support of the bedding, which formed a cumbersome and expensive contrivance when completed. To overcome this objection we have devised a simple means to connect the wire mattress frame with the head and foot parts of the bedstead, and thus discard the ordinary heavy iron side-rails and iron straps, forming the bedding support. See cuts 22, 23 and 24, Brass Bedsteads.

This Company's STANDARD quality of mattresses, used also in connection with our iron and brass bedsteads, are made of the Patented form of weaving shown in Plate 1. For the mattress they are designated as follows:

"HARTFORD," "ORDINARY," Standard grade.
"HARTFORD," "NATIONAL,"
"HARTFORD," "IMPROVED,"
"

The above superior mattresses are offered at the very low prices named in the list to afford all an opportunity to secure a spring-bed which will endure for a lifetime.

For a fuller description of the advantages of the "HART-FORD" COMPANY'S Patented webbing used for the standard grades attention is called to *Plate* 1.

The cheaper grade of mattresses manufactured by this Company are termed

"HARTFORD" "ORDINARY No. 2."
"HARTFORD" "IMPROVED No. 2."
"HARTFORD" ÆTNA No. 2."

More fully described in description of Plate 2.

The latter forms a good mattress for the price (see pages 15, 16), but inasmuch as it contains a smaller quantity of wire and is less elastic, it is a correspondingly inferior spring bed to the Standards,

"ORDINARY," "NATIONAL," and "IMPROVED."

THE SECOND GRADE MATTRESSES ARE MADE SUPERIOR TO THE MANY SO-CALLED WOVEN WIRE MATTRESSES.

TWO DECISIONS IN THE UNITED STATES COURTS HAVE BEEN RENDERED SINCE THE FIRST DAY OF JANUARY, 1880, EACH OF WHICH SUSTAINED THE J. M. FARNHAM PATENT, OWNED BY THIS COMPANY.

We desire to correct a misapprehension formed by many in regard to the adjusting device attached to the Hartford Woven Wire Mattresses. The object is to provide a means for tightening and relaxing the strain of the wire to any desired condition, and not, as is supposed, to overcome sagging.

The public are requested to communicate direct with this Company for catalogues and price lists, when they are unable to obtain the "HARTFORD" WOVEN WIRE MATTRESS from furniture dealers in their immediate towns. All such communications will receive careful and prompt attention.

For shipment to remote points these goods are packed in parts, termed "Knock-Down," which reduces the bulk to less than one quarter of the space occupied when set up. A large saving of freight charges, and injury to the mattress in transportation is thus avoided. Simple instructions for setting up accompanies knock-down shipments, so that persons of ordinary mechanical skill can readily place the parts in their proper places.

Improved means for putting the mattress parts together will be furnished if desired, for a very moderate price. With the latter appliance the parts are put together in a complete condition in eight minutes.

The bed bottom called the "Champion"—illustrated a few pages on—is the most perfect bed of its kind of helical suspension beds yet put upon the market. It may be sent in the "Knock-Down," occupying only 2½ cubic feet of space; is elastic, durable and comfortable. No sagging or rolling to center on this bed. Shipped as third-class freight. See pages 30 and 31.

Can be set up in five minutes easily, by hand.

DIRECTIONS.

OBTAIN THE EXTREME LENGTH AND WIDTH OF THE BEDSTEAD. IF POSTS OR BLOCKS PROJECT ON THE INSIDE CORNERS OF THE BEDSTEAD, THEN MEASURE THE SPACE BETWEEN THE PROJECTION FOR THE WIDTH, AND MEASURE FROM THE HEADBOARD TO THE FOOT-BOARD FOR THE LENGTH.

A LIST OF THE NAMES OF INSTITUTIONS USING THE HARTFORD WOVEN WIRE MATTRESS, TOGETHER WITH A FEW TESTIMONIALS ARE PUBLISHED IN THE CLOSING PAGES OF THIS CATALOGUE.

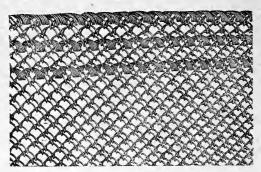

PLATE 1.

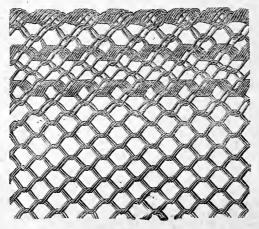

PLATE 2.

DESCRIPTION OF WOVEN WIRE FABRICS.

PLATE 1 represents the form of weave in fabrics used for our STANDARD or BEST MATTRESSES. The spiral wires are placed in single contact with each other at the points of intersection. In this form of web less friction exists, and greater elasticity is obtained. The closeness of the web, relieved at intervals of five inches by strong and handsome cords, forms a more substantial and elastic spring bottom, containing a greater quantity of wire than any other form of weaving.

PLATE 2 represents a form of weave with a diminished quantity of wire, used in fabrics for CHEAP OF SECOND GRADE MATTRESSES. The spiral coils in this form are placed in contact with each other the entire length of the bed-bottom. This, added to the increased contact at the points of intersection, forms a rigid fabric, which renders it less elastic than plate 1 form.

CLASS B.

Double Size, \$12.00.

Class B, "National," the first woven wire mattress made with an adtress is made exclusively as shown in Plate 1. It frequently occurs that persons desire a changed condition of the tension. For this purpose one of the end-bars, which, when operated by a wrench, any desired tenis that a uniform change is effected. The center bolt serves to overcome the relaxed condition of the center of the webbing when the end-bars are change desired is effected without removing the wire mattress from the justing device, is yet as popular as formerly. The webbing for this matthree suitably strong machine bolts are provided and arranged through sion is produced. The advantage of this mode of adjusting the tension sprung, often the result of using imperfectly seasoned material. Any bedstead, and the length of the mattress is neither increased nor diminished in the process of changing.

CLASS E.

NATIONAL MATTRESS.

The cut below represents the National Mattress with a division in the center. This style was made to suit parties who were sensitive to any motion whatever, arising more or less from other spring beds, but which, by this simple device, is entirely obviated. The fabric is cut through the middle, so that each person has a distinct and separate sleeping arrangement.

WITH DIVISION IN THE CENTER.

Price, \$12.50.

THE NATIONAL FIXTURE.

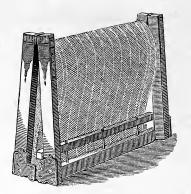

Many persons, and a few dealers, who have seen the NATIONAL WIRE MATTRESS advertised, have been uncertain wherein it differed from the regular Woven Wire Mattress. In order to explain the improvement more fully, an enlarged representation has been made, by which at a glance, the advantages of the NATIONAL can be seen. The Round Corner has proved very popular, as being adapted to the present style of bedsteads.

The chief advantage is, however, that the taste of the buyer and user can be exactly suited by changing the tension. This is readily done by applying a Wrench represented, to the heads of the bolts, and serewing them one at a time, either up or back, according as a hard or easy bed is desired. These bolts turn very easily with one hand, and the arrangement for thus tightening or loosening the fabric is believed to be the most simple and at the same time effective device that can be invented.

The public are cautioned against another article of nearly the same name, which has small resemblance to, and little of the merit of, our Perfect National Wire Mattress.

CLASS F. FOLDING NATIONAL.

Double Size .- Price, \$12.50.

Convenient for shipping singly to remote points, and carrying through narrow hallways, and up and down narrow stairways. The fabric must be arranged after the head and foot are brought together.

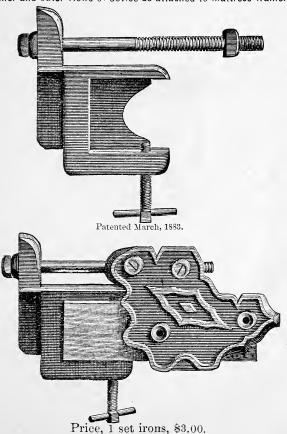

CLASS G.

MATTRESS FOR STEAMERS, SLEEPING CARS AND BARRACKS.

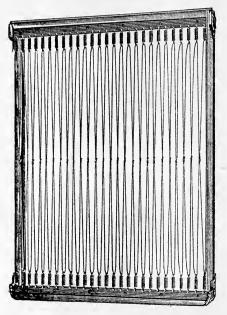

No regular sizes can be given.

Putting-up device for Wire Mattresses when shipped "Knock Down," showing inner and outer views of device as attached to mattress frame.

"THE CHAMPION."

Best Helical Suspension Spring Bed in the market.

Noiseless, durable, no sagging, no rolling to center of bed.

Patented April, 1883.

"THE CHAMPION."

Hartford Woven Wire Lounge Spring or Bottom.

Protected by Patent.

This lounge bottom or spring can be used with one thickness of carpet, blanket, or a very little upholstering, making a complete woven wire bed, and combining all the valuable qualities of such a bed, rendering it a most luxurious and delightful reclining arrangement at moderate cost. The upholstery being greatly lessened in amount than that used in the ordinary sofa lounge, the trade will be enabled to place it in customers' hands at reasonable prices.

CLASS No. 13.

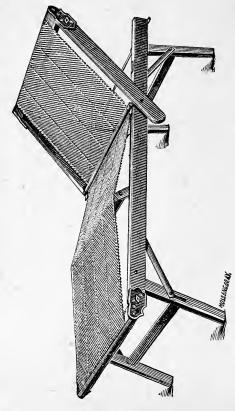

Cut showing the manner in which wire mattress may be inserted in lounge frame.

STATING NUMBER AND GIVING SIZES DESIRED.

Brass Bedsteads.

Inquiry from all parts of the country has induced us to add to our extensive list a number of elegant brass bedsteads, of American manufacture. Combined with them, for the support of the bedding, is the Woven Wire Mattress, connected by means of our improved device for attaching the mattress frame to the head and foot parts of the bedstead, thus obviating the necessity for using the heavy iron side rails and strap iron heretofore used to complete the bedstead.

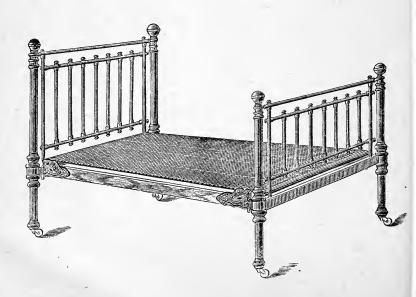

The expense and weight of the bedstead by this combination is lessened, and forms a complete and convenient article of usefulness.

The highly polished surface of the brass is protected by superior lacquer, and will retain its brightness for an indefinite period.

TESTIMONIALS.

No. 32 CORDTLANDT STREET, NEW YORK, December 28, 1869.

I have no objections to your putting my name to as strong a recommendation as you dare write. I believe your Wire Mattress is destined to supersede all the first-class spring beds. They give my family entire satisfaction in every respect.

R. C. BROWNING.

Institution for the Relief of the Ruptured and Crippled, New York, January 8, 1870.

I consider the Woven Wire Mattress one of the most invaluable inventions of the day, as it contributes so largely to the relief and comfort of the sick. The wire fabric of which it is formed yields uniformly to the body, obviating undue pressure on the prominent parts of the emaciated patient. Two thicknesses of a comfortable are a sufficient protection to the patient from the wire fabric, and is all that is required for warmth in a temperature of sixty degrees. This light covering is readily removed and washed in extraordinary cases, and the facility afforded for changing the bedding obviates the necessity for disinfectants. This information may be used by the Company wherever it will tend to the comfort of the sick, at home or in the hospital, or for family use, as I consider the Mattress not only a comfortable bed, but a means of maintaining good health.

DR. JAMES KNIGHT,

Physician and Surgeon to the Institution.

ILLINOIS STATE ASYLUM FOR THE INSANE, JACKSONVILLE, March 21, 1879.

The Woven Wire Mattresses purchased of the Woven Wire Mattress Company of Hartford, Conn., in 1871, and of Whittlesey & Peters, in 1874, as well as those purchased of the latter firm at subsequent dates, have all proven eminently satisfactory. The elasticity of the Hartford weave, as well as the strength and durability of both styles, commend them for the use in families and in public institutions; and I take pleasure in recommending your goods for neatness, durability, and economy, as superior to any other with which I am acquainted.

Yours very truly,

H. F. CARRIEL, M. D., Supt.

Brevoort House, New York, March, 1871.

We are very well satisfied with the Wire Mattresses. Our Mr. Waite would not exchange the one he is using for any other kind of under-bed. Those in use in our best rooms have given our guests great satisfaction.

CLARK & WAITE.

From the Report of the Executive Committee of the Hartford Hospital, April 10, 1871.

The hospital is now supplied with the Woven Wire Mattress, with iron frame. There are many reasons why the wire mattress is peculiarly adapted to hospitals. This mattress, with iron frame, costs less than a good hair mattress. They require no covering but blankets to protect the patient from the wire. They are elastic, and yield to the form of the body like a water bed. Every patient can have a perfectly clean bed when admitted.

They are free from vermin of every kind. They are durable, and never settle or sag. Wire mattresses have been in use for a long time in the hospital with perfect satisfaction, and aid much in the recovery of the patients by the cleanliness and comfort which they contribute to their occupants.

From the Report of the Executive Committee of the Hartford Hospital, April 12, 1875.

Woven Wire Mattresses have been in use in the Hospital during the last five years. They have exceeded our highest expectations. In order to have the full benefit, in a sanitary point of view, they must not be used with a mattress of any kind. They make a perfect bed in a hospital by placing two double blankets over the wire. In this manner over one hundred are in constant use, with perfect ease and satisfaction to its occupant. By so doing, every patient on entering the wards is placed on a clean bed.

CONNECTICUT INDUSTRIAL SCHOOL FOR GIRLS, MIDDLETOWN, CONN., Feb. 24, 1876.

WOVEN WIRE MATTRESS CO.

Gentlemen:—We last year furnished eighty (80) rooms with the mattresses of the Woven Wire Mattress Co. of Hartford, Conn., and find them in every way satisfactory and pleasing.

We expect to provide the same for our new "Allyn Home" when completed.

MARY E. ROCKWELL, Asst. Supt.

Butler Hospipal, Providence, R. I., February 25, 1876.

WOVEN WIRE MATTRESS Co., HARTFORD, CONN.

Gentlemen:—We already have a supply of the Woven Wire Mattresses, some of which have been in use six years at least. In comfort, convenience, and durability they far exceed my expectations, and I consider them une qualled by any other device for the purpose.

Yours very truly,

JOHN W. SAWYER, M. D.

INSANE ASYLUM OF NORTH CAROLINA, A RALEIGH, N. C., March 27, 1876.

WOVEN WIRE MATTRESS Co.

Gentlemen:—The use of the bedstead recently received from the Woven Wire Mattress Co. convinces me of their superiority over any iron bedstead with which I am acquainted for hospital use.

Yours truly,

EUGENE GRISSON, Supt...

Office of the South Carolina Lunatic Asylum,) Columbia, S. C., April 7, 1876.

THE WOVEN WIRE MATTRESS Co., HARTFORD, CONN.

Gentlemen:—Your iron bedstead for hospital use, with Woven Wire Mattresses, have now been in use in this institution for several months. From our experience with them I do not hesitate to say that for neatness, durability, and comfort, they are superior to any bedstead ever before presented to the public for use in hotels, hospitals, and all other public institutions.

Yours respectfully,

J. F. ENSOR, M. D., Supt.
